WARP Studio launched the first version of "**Web Manager**" software in June 2000. Custom-made for non-professional Internet users, "**Web Manager**" represents the ideal tool for updating and maintaining web sites.

"Simple, convenient and efficient", this is the chosen statement to describe the first WARP Studio software product. The new version of the "**Web Manager**" software, introduced this year, now supports many more features than the previous one.

Multi user login and management is one of the newly available features providing more flexibility for handling different tasks in a multi user environment.

It additionally supports connectivity to now readily available MMS servers. A first "**Web Manager**" prototype suite was already launched at the 2003 edition of MelideEstate Festival.
